The Retirement Industry 2024

A view of the trends and advances that mattered most this year

Reported by BETH BRAVERMAN | as told by Alan Glickfeld

On the past year, plan sponsors have continued implementing both mandated and optional plan features under the Setting Every Community Up for Retirement Enhancement (SECURE) Act 2.0. At the same time, ongoing technological advancements have enabled participants—and the retirement industry, broadly—to explore new ways to improve financial wellness. Here are some trends we have a look at the biggest trends and innovations of 2024.

Sponsors Embrace AI

The retirement industry learned further into finding the best ways to harness the power of artificial intelligence this year; many recordkeepers and providers have already incorporated it into their systems and processes for a range of tasks.

For more stories like this, sign up for the PLANSPONSOR Slideshow daily newsletter.

Users vary widely. Providers such as financial fitness employ AI to power their financial coach, Ellevest, while Fidelity is using generative AI to power its Fidelity Assistant, which is available to Fidelity Wealthcare Advisor solutions and services as an AI platform.

Plan sponsors and their advisers and consultants are starting to integrate AI into existing plan design, or, fully reoptimizing processes. The industry's ability to leverage AI to improve the way it delivers retirement plan services advances parallel to lower costs and increasing efficiency as AI scales.

"AI is revolutionary, not revolutionary," says David Levine a partner in Groom Law Group in Washington, noting that providers have used automation for years. "It's going to be a tool that will help us do our jobs better, but it's not going to replace us. It's always further customization of all of that, making it more cost-efficient to do more with the people you have," he says.

Meanwhile, participants are growing more comfortable with AI-powered, enabled apps, and that acceptance looks poised to continue. Deloitte Center for Financial Services predicts that by 2028, AI will power tools used by a leading source of total investment advice, reaching a 78% share by 2028.

Portability Makes Progress

Several recordkeepers continued to prioritize plan portability this year, with the goal of automating the process of moving a retirement plan account from one plan sponsor to another if the small-balance participants—i.e., those with $7,000 or less—leave.

Retirement clearinghouse estimates that, if widely adopted, portability could grow the net incremental wealth of participants by $1.6 trillion. This is because small accounts, in terms of dollar amounts and percentages, are often left behind when participants leave employment, rather than rolled over to a qualified, tax-deferred, employer. The left-behind then balance rolled into a safe harbor individual retirement account where, according to an IRS-mandated portability simulation, it will sit in a money market fund. Of these accounts, 41% will never get cashed out or show up in the retirement system for at least five years.

The highest-profile effort to preserve all such small accounts, [401\(k\) Fix](https://www.401kfix.com/), launched in October 2023 and, as of October 2024, had [more than 100 recordkeeper members](https://www.401kfix.com/news/401k-fix-surpasses-100-recordkeeper-members-eyes-2025-launch/) eyes 2025 launch. Fidelity Investments, Principal Financial Group, ISM and Vanguard, as of this September. PSN reported that it had signed on more than 4,000 plans, representing over 2.2 million active participants. The network has processed 200 plan transactions, and 4,000 more are in the pipeline. Empower, the largest recordkeeper, is the only recordkeeper that has not signed on.

"We've taken the first baby steps toward increased portability, through an automatic portability network," says Jason Roberts, president and chief client solutions executive at MTBC in New York City. "It's a huge undertaking, a changing ecosystem, being able to seamlessly move assets into their new plan should hopefully put them in a better position to manage their retirement assets."

CITs Step Ahead

Per years, collective investment trusts have gained ground on mutual funds as a target-date vehicle, and, in August, [they finally surpassed them](https://www.plansponsor.com/cits-finally-surpass-mutual-funds-target-date-vehicle/). Morningstar. That change is the most evident in larger plans.

Two-thirds of the largest DT providers surveyed in Cerulli Associates' 2024 Collective Investment Trust Provider Survey said they believe that, when [considering CITs vs. mutual funds](https://www.plansponsor.com/cits-vs-mutual-funds-the-pros-and-cons/), plan sponsors with between $100 million and $1 billion in assets will be the most likely to consider CITs. Those with fewer than $100 million in assets are the least likely to consider CITs, and those with more than $1 billion in assets fall in between.

"The lawsuits are continuing to evolve, and they're getting weeded and winnowed," says Levine. "The plaintiffs' bar is sophisticated, and they're looking at expenses and fees, how they're getting much more complex with a lot of generalities."

[Jabs Supreme Court ruling that struck down the Chevron deference standard](https://www.plansponsor.com/supreme-court-overturns-chevron-deference-standard/) could lead to further expansion of litigation theories, since the federal government will no longer be able to rely on its own interpretations of rules. That, in turn, could further open plan sponsors up to litigation and create greater uncertainty for them and their providers, Levine says.

Consolidation Continues

The decades-long trend toward consolidation kept going this year, with the [Cerulli Associates' 2024 Retirement Plan Provider Study](https://www.plansponsor.com/cerulli-associates-2024-retirement-plan-provider-study/) finding increased demand from plan sponsors and a recognition that positioning regulars likely requires both scale and diversity of offerings. To that end, the wave of consolidation has evolved to reflect the convergence of health, wealth and retirement, Levine says. Cerulli's 2024 Retirement Plan Provider Study, for instance, found that:

Large aggregators now look to add wealth management and other benefit offerings, as well as retirement plans, to their existing offerings, Levine says. "One person can benefit from this trend, wanting to talk about where are more holistic in their strategies and their understanding of what plan sponsors need in terms of what they're going to do with their plan, and more sophisticated investment strategies," Roche says. The marketplace is "ripe" for this kind of consolidation, he says, as providers look to offer a strategic set of solutions in consultation with plan sponsors.

While much of the year's mergers and acquisitions activity came from larger players, [Corebridge Financial's purchase of Cargas Systems](https://www.plansponsor.com/corebridge-financial-acquires-cargas-systems/) was a notable exception, among the largest recordkeepers continues as well. That acquisition will add $65 billion in assets under administration to Voya's overall total. Even if the deal closes as planned, in January 2025, the expanded Voya will be the fifth-largest recordkeeper, behind Fidelity Investments, Empower, Principal Financial Group and Vanguard.

ESG Is Increasingly Politicized
